TECHNICAL SHEET

B875	M-ENDO BROTH				
Formula					
Ingredients :		gms/lit.			
Peptic digest of animal tissue		20.00			
Yeast extract		6.00			
Lactose		25.00			
Dipotassium phosphate		7.00			
Basic fuchsin		1.00			
Sodium sulphite		2.50			
Final pH (at 25°C) : 7.5 ± 0.2					
Directions :					
Suspend 61.5 grams in 1000 ml distilled water. Heat if necessary, to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 5 minutes. Cool and use as required in membrane filtration technique. The medium should be used on the same day of its rehydration.					
Caution: Basic fuchsin is a potential carcinogen and care should be taken to avoid inhalation of the powdered dye and contamination of the skin.					
Principle :					
Peptic digest of animal tissue and yeast extract provide essential nutrients especially nitrogenous for the coliforms. Lactose is the fermentable carbohydrate. Sodium sulphite and basic fuchsin inhibit the growth of gram-positive organisms. Phosphates buffer the medium. Coliforms ferment lactose and the resulting acetaldehyde reacts with sodium sulphite and basic fuchsin to form red colonies and similar colouration of the medium. Lactose non-fermenters form colourless colonies.
